Conventional display devices include a class of devices that use light emitting diodes (LEDs). For example, it is known in the art to fabricate a conventional light source device that includes a stack of LEDs. Typically, each of the LEDs in the stack are connected in series. Conventionally, the electrodes for connecting each of the LEDs are connected in parallel to a power source (e.g., a transformer or rectifier) that provides a voltage to the LEDs. The LEDs are powered in this manner because the LEDs cannot operate at direct voltage. It is also known to control the brightness of the LEDs. For example, it is known to use diodes to control brightness by limiting the current flow through the LED. More specifically, a resistor is often added in series with the LEDs. When a diode is used in the circuit, the resistor is connected in parallel with the diode. The parallel resistor can be referred to as a diode clamp. In this manner, the diode clamp limits the current flow through the LEDs. In another method, a transistor can be used to switch a current flowing through the LEDs. More specifically, the transistor is connected in series with the LEDs to switch current flow through the LEDs. Conventional LED light engines are typically packaged as an LED light engine package. For example, the LEDs are typically installed inside of a plastic lens. The lens is molded or otherwise affixed to a heat sink, which absorbs and dissipates heat from the LEDs. Heat sinks and/or lenses are affixed to the light engine during fabrication. Light may exit the light engine through a side of the heat sink (e.g., directly opposite a lens in the case of a lensed LED light engine). Light engine packages may be used in a wide variety of applications. For example, LED light engine packages are used in a variety of outdoor and indoor applications. In one application, a high intensity light engine is used as an entry light for automobiles. For example, these light engines are used as vehicle entry lights. It is desirable for these entry lights to be durable. In addition, these entry lights must be lightweight and have a small footprint. Conventional LED light engine packages can be expensive. To reduce cost, conventional LED light engine packages can be fabricated in high quantities. For example, a number

Oct 20, 2012 Se trata de la primera parte de la obra del cardenal de Colonia del romano Francisco Suárez; la segunda parte correspondería al cap. de contratos, atalaya, votos y ruegos. Le libre introduccin del derecho privado suareziano en la ley ius civile franca va marcando una nueva era i lo Derecho privado suareziano y demarchar la raiz de los principios biológicamente humanos.
